

What is claimed is:

1 1. A method comprising:
2 receiving modified data that is modified from a data
3 field of a source version of a collection of data and other
4 data of the source version of the collection of data;
5 determining if the other data differs from current data
6 included in a current version of a collection of data that
7 corresponds to the other data; and
8 if the other data does not differ, including the modified
9 data in the current data.

1 2. The method of claim 1 further comprising
2 transmitting the modified data to a location having access to
3 the current data.

1 3. The method of claim 1 further comprising, if the
2 other data does differ from the current data, enabling
3 verification of the modified data before including the
4 modified data in the current data.

1 4. The method of claim 3 further comprising receiving
2 verification and including the modified data in the current
3 data.

1 5. The method of claim 1 in which the collection of
2 data includes a web page.

1 6. The method of claim 1 in which the other data
2 includes hidden data.

1 7. An article comprising:
2 a machine-readable medium which stores machine-executable
3 instructions, the instructions causing a machine to:
4 receive modified data that is modified from a data
5 field of a source version of a collection of data and other
6 data of the source version of the collection of data;
7 determine if the other data differs from current
8 data included in a current version of a collection of data
9 that corresponds to the other data; and
10 if the other data does not differ, include the
11 modified data in the current data.

1 8. The article of claim 7 further causing a machine to
2 transmit the modified data to a location having access to the
3 current data.

1 9. The article of claim 7 further causing a machine to,
2 if the other data does differ, enable verification of the
3 modified data before including the modified data in the
4 current data.

1 10. The article of claim 9 further causing a machine to
2 receive verification and include the modified data in the
3 current data.

1 11. The article of claim 7 in which the collection of
2 data includes a web page.

1 12. The article of claim 7 in which the other data
2 includes hidden data.

1 13. A system comprising:
2 a device configured to communicate with a network; and
3 a mechanism accessible by the device and configured to
4 receive a web page across the network from a user
5 including original data and modified data that is modified
6 from the original data,
7 determine if the original data differs from current
8 data included in a current version of the web page,
9 include the modified data in the current data if the
10 original data does not differ from the current data, and
11 enable the user to verify the modified data before
12 including the modified data in the current data if the
13 original data does differ from the current data.

1 14. The system of claim 13 in which the mechanism is
2 also configured to transmit the web page including the
3 original data to the user.

1 15. The system of claim 13 in which the mechanism is
2 also configured to transmit the current version of the web
3 page to the user.

1 16. The system of claim 13 in which enabling the user to
2 verify the modified data includes

3 inserting the modified data into the current version of
4 the web page,

5 noting the differences between the original data and the
6 current data on the current version of the web page,

7 transmitting the current version of the web page to the
8 user, and

9 receiving verification of the current version of the web
10 page from the user.

1 17. The system of claim 16 in which the mechanism is
2 also configured to include the modified data in the current
3 data after the user verifies the data modified from the
4 original data.

1 18. A method comprising:
2 transmitting a web page including hidden data to a user;

3 receiving a web page from the user including the hidden
4 data and modified data that is modified from the hidden data;

5 determining if the hidden data differs from current data
6 included in a current version of the web page;

7 if the hidden data does not differ from the current data,
8 including the modified data in the current version of the web
9 page;

10 if the hidden data does differ from the current data,
11 enabling the user to verify the data modified from the hidden
12 data before including the modified data in the current version
13 of the web page.

1 19. The method of claim 18 further comprising
2 transmitting the current version of the web page to the user.

1 20. The method of claim 18 in which enabling the user to
2 verify the data modified from the hidden data includes

3 inserting the modified data into the current version of
4 the web page,

5 noting the differences between the hidden data and the
6 current data on the current version of the web page,

7 transmitting the current version of the web page to the
8 user, and

9 receiving verification of the current version of the web
10 page from the user.

1 21. The method of claim 20 further comprising, after
2 receiving verification of the current version of the web page
3 from the user, including the modified data in the current
4 version of the web page.
